

The Centre for Clinical Epidemiology & Evaluation (C2E2) undertakes research and training and provides evidence-based advice to advance a sustainable health system for British Columbians.

C2E2

How are health and financial burdens affecting our community?

How can we improve patient health outcomes?

We are committed to developing research methodology and providing statistical expertise for health care policy makers and health researchers. We also give evidence-based advice to help deliver high quality, safe and effective care.

Research Programs

Health Services and Outcomes Research

Culture, ethnicity and health
Long-term care

Systematic Reviews
[cross-cutting core research theme]

Clinical Research methodology

Health Economics

Health Research Areas

Looking beyond traditional boundaries

We synthesize our broad range of health research into three areas:

Clinical research

Explore the safety, effectiveness and efficiency of health care interventions and procedures, including disease prevention measures

Applied health services and health economics research

Investigate the organization, management, financing, delivery and outcomes of care

Knowledge translation

Promote and facilitate evidence-informed decision making at practice, managerial and policy levels

HEALTHIER
LIVES
THROUGH
DISCOVERY

Excellence through Collaboration

Building strong and long-lasting research partnerships

We focus on research collaboration that allows the highest quality of clinical and health services research. We partner strategically to maximize our research impact for the benefit of our society and Canada's economy.

“High quality health research is a team effort. Our long-standing collaborations have delivered outstanding research coupled with practice and policy improvements.”

Research matters.

We lead and excel in the generation of health knowledge through discovery, education, application and evaluation.

Healthier lives through discovery

Innovative Research with Direct Health Impacts

Leading the way to healthy living and a stronger health care system

VCHRI

We focus on discovery and translational research that directly impacts health outcomes.

Vancouver Coastal Health Research Institute (VCHRI) is one of Canada's top funded health sciences research centres, receiving \$80-100 million in research funding every year. VCHRI is the research arm of the Vancouver Coastal Health and a health partner of the University of British Columbia.

A Dynamic and Diverse Research Environment

Providing best care, cutting-edge treatment and innovative solutions

VCH Research Institute is a major player in BC's Health Research Industry – there are research centres, research programs and many evolving research areas generating world class research outputs leading to health and economic benefits for British Columbians.

“What sets us apart is our rich, collaborative and multidisciplinary environment. We work together to create opportunities for novel and advanced treatment and prevention options to health service delivery.”

— Dr. W. Robert McMaster
VCHRI Executive Director

Together we make a difference.
